Mr. Ritter,

I am a student at Rochester Institute of Technology and I am part of the RIT Linux User Group. I am working on a project with RITLUG to create a custom version of Fedora Linux. Our project can be found at <https://github.com/RITlug/TigerOS>. We would like to include MIT alloy in it. Unfortunately a component of Alloy, zChaff is not under a free and open license that will allow use to redistribute it as part of an RPM package. I wanted to notify you of this and get your permission to redistribute zChaff.

Please let me know if this is ok.

Thank you.

Sincerely,

Aidan Kahrs

Dear Aidan: So long as you will use the zChaff for research and educational purposes only and not for any commercial purposes, we hereby grant you permission.

Best of luck, John
